

GOUDA *vuurvast belgium*

an **ANDUS** group company

Gouda Vuurvast Belgium

Partners in maintenance

The installations on which we work often are the very core of production. Shutdowns are a very costly exercise. Gouda Vuurvast Belgium's flexible approach always focuses on ensuring that, whether ad hoc interventions or scheduled activities, downtime is kept as short as possible. Our skilled and reliable professional staff are committed 24 hours a day, seven days a week to guarantee this. Our expertise does not stop with major industry groups as Petrochemicals, Environment & Energy and Non-ferrous metals, indeed, our know-how extends also to sectors such as cement and steel. As a well-established partner for the supply, installation and maintenance of refractory linings, we are able to provide our clients with the best future-oriented solutions in order to optimize the reliability of their installations.

Integrated approach

Refractory linings form a whole with the metal casing housing them. There is an ever-increasing customer call today for a total package. Gouda Vuurvast Belgium responds hereto by offering refractory related steelwork which may include prefabricated shop

components for incorporation in an installation or for the replacement of corroded steel furnace casing during a shutdown. As we ensure planning and coordination requirements of the various work components, our clients are able to focus on other aspects of the project.

Competence without frontiers

Gouda Vuurvast Belgium operates worldwide beyond its regional customer circle, in a number of core competences. For FCC Unit shutdowns and turnarounds our service package comprises both the refractory lining as well as the supply and installation of anchorage systems including hexmetal. Fibre linings in HRSG boilers can be replaced including the design, supply and fitting of the protective sheeting.

New construction projects

Within the region Gouda Vuurvast Belgium is preferred partner for a number of leading Original Equipment Manufacturers in the petrochemical, environmental and energy markets. These projects are executed partly in shop and partly on site. We supply and install the refractory linings for the equipment at its worldwide destination.

Safety and quality

The industrial sectors we operate in call for the highest level of safety. All Gouda Vuurvast Belgium staff are trained to comply with the latest standards, such as VCA Petrochemie. Our integrated QHSE system combines quality, safety, good working conditions and environmental aspects into practicable work procedures. These procedures are being adapted on a project-specific basis and incorporated in a project plan. All staff involved are familiar with this plan, so that they are able to cope efficiently with specific requirements and circumstances.

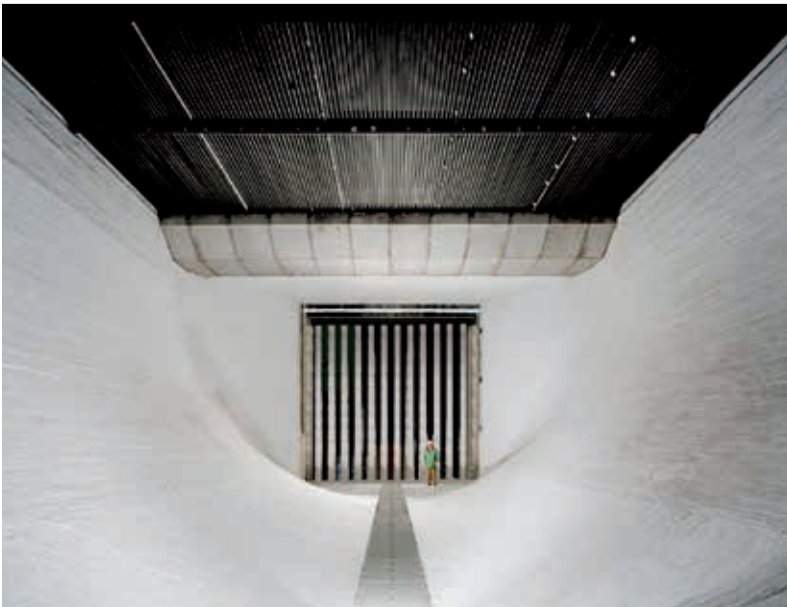

Synergy

The organizational and physical proximity of other operating companies of the Andus Refractories division enables Gouda Vuurvast Belgium to generate synergy by working with associated companies such as Gouda Refractories, Gouda Projects, Gouda Vuurvast Services and Gouda Feuerfest. Gouda Vuurvast Belgium will at all times operate as a recognizable and approachable main contractor.

Part of a greater whole

Gouda Vuurvast Belgium is part of Andus Group, an international operating holding company. The subsidiaries of Andus Group have one aim: Serving the industry. And they have one characteristic in common: to be the best within their own specialisation. On specific projects, group companies work together, combining their experience and resources.

The ambition is clear: the Andus Group companies are always aiming to achieve maximum client satisfaction. This requires high quality, experienced and skilled project management and the use of innovative methods when designing, producing and realising projects. That is why Andus Group can continue to further strengthen their possibilities at the top of the different market segments.

In short: Andus Group is a powerful and reliable partner completely geared to your success.
